

CAPA Consult a certified ip-label.newtest partner

CAPA Consult announce that they are now officially recognized as a certified partner of ip-label.newtest.

The partnership between ip-label.newtest and CAPA Consult results from a common interest in monitoring and evaluating availability and performance of ICT services from an end-user perspective (Quality of Experience/QoE). ip-label.newtest has been producing solutions for End-to-End availability and performance monitoring for more then 15years.

Thanks to this partnership CAPA Consult has been able to expand its own scope of consultancy services in the area of design, measurement and evaluation of ICT services quality to QoE methodology and extend the delivery portfolio to solutions for measuring and evaluating Quality of Experience.

About CAPA Consult s.r.o.

Czech Limited Company CAPA Consult s.r.o. provide consultancy and engineering services in the area of Information and Communication Technologies and SW application development.

More information about services and product offering of CAPA Consult is available on www.capaconsult.cz .

About ip-label.newtest

Around the world, *ip-label.newtest* solutions measure the quality of applications from the user's point of view: business applications as well as web, voice and even TV over IP platforms. A trusted third-party with its own metrology infrastructure (nearly 100 million measurements every day) and independent institute, ip-label.newtest is sought out as much by world-class enterprises and their service providers to track the performance of their critical applications to give them a competitive edge, as by telecom operators and IT managers mindful of the robustness of their infrastructures.

Because license mode and the Software as a Service (SaaS) mode correspond to different types of usage and needs, ip-label.newtest offers its customers both of the company's two tried-and-true models. www.ip-label.com
